Person-Centered Planning Process

Cal MediConnect is a pilot program to integrate medical care, long-term services and supports, coordination of behavioral health services and social services for people eligible for both Medicare and Medi-Cal. Person-Centered Planning is core to the pilot’s goals of achieving integrated care.

L.A. Care and Delegates will use Interdisciplinary Care Teams (ICTs) for all members to develop a person-centered plan and to deliver individualized, integrated care.

An ICT is composed of knowledgeable, licensed, and (as appropriate) credentialed contracted and employed individuals involved or closely associated with the care of the member, based on the needs of the member.

The member, the center of the care planning process, may choose to include clinical or non-clinical staff and/family or caregivers, and participants as part of their right to self-direct care.

Possible ICT members include the following:
- Member/Caregiver/Authorized Representative
- PCP and/or Specialist
- Behavioral Health Specialist, which may include, but is not limited to, a Specialty Mental Health Provider or a Substance Use Disorder Counselor
- Care Manager, Social Worker, Patient Navigator
- Specialized Providers such as Pharmacists
- County IHSS Social Worker
- CBAS Provider
- MSSP Coordinator
- IHSS Provider

The ICT is offered to every member. Each member will have access to an ICT and will have documentation of ICT meeting completion. The Care Manager leads the ICT and is responsible for organizing the ICT.

Where Does the ICT Meet?
- In a location most convenient for the ICT members, frequently by phone.

When Does the ICT Meet?
- Meet initially to develop the ICP and at least annually thereafter
- When there is a change in the member’s condition, including social change
- At the request of the member or provider

What Does the ICT Do?
- Analyze and incorporate initial and annual HRA results into an Individualized Care Plan (ICP)
- Collaborate on development and annual update of each member’s care plan
- Communicate coordinated care plans across all settings
- Manage the member’s medical /cognitive / psychosocial / functional needs and communicate to the member, caregiver (as appropriate, and PCP)
• Assess and address identified social service barriers to achieving ICP goals
• Assess members for access to long-term care services and supports enabling them to remain in their homes and communities as long as possible
• Coordinate ICP integration addressing Medical and social needs
• Engage members to self-direct their care
• Provide and support person-centered care coordination and planning
• Identify community-based resources as needed and make referrals
• Assist with measuring effectiveness and extent to which care is managed

How Does It Work?
Care Managers develop an initial Individualized Care Plan (ICP) within three months of member enrollment with L.A. Care. The Plan identifies the member’s strengths, capacities, and preferences and provides additional care options, including as appropriate for transitioning from a nursing facility to the community as well as long-term care needs and the resources available.

ICPs are discussed in the ICT meetings. Meeting minutes document PCP/member/caregiver participation and other professionals. Required confidentiality agreements maintain HIPAA compliance.

Member Rights
The member has the right to opt out or decline involvement in the ICP process. A member’s decision not to participate will be documented in the care plan record.

If member designates a proxy, L.A. Care and Delegate staff will follow established policies to confirm legal authority, including verbal consent from the member. Caregivers may fax or mail the legal documentation, which is filed in the care management record.

Member Engagement
The Care Manager will engage member and the caregiver to actively design their care plan initially and at re-assessments by empowering members to identify successes or change self-directed goals. To ensure that the member is prepared to participate in the ICP, the Care Manager provides the following information:
• Educational materials on his/her condition
• Information on how to involve caregivers and social supports in care planning
• Self-directed care options
• Information on how to access LTSS and IHSS services if applicable
• Other treatment options, supports and/or alternative courses of care available

Upon request, information is provided in alternative formats and in their preferred written or spoken language.

The Individualized Care Plan (ICP)
The Care Manager maintains the ICP Individualized Care Plans which are electronically retained in a HIPAA compliant format within the Information Systems Department for a period of 10 years from the last date of creation. This member-centered care plan is a comprehensive document, developed in collaboration with all respective care providers.
The care plan includes, but is not limited to:

- Assessment of member goals and preferences, including primary language, cultural needs, health literacy, self-management goals, overall goals, member's right to self-directed care
- Measurable objectives and timetables to meet medical, Behavioral health services and long-term supports and service needs
- Timeframes for reassessment and updating of care plan, to be done at least annually or if a significant change in condition occurs

**Care Coordination**

Care Managers facilitate care coordination among the PCP and other providers, e.g. behavioral health, non-emergent medical transportation, DME repair, dental providers, LTSS, etc. The Care Manager also shares the ICP with the ICT, member and caregiver

**Independent Living and Recovery and Wellness Principles**

The ICP is developed using the philosophy of independent living and principles of recovery and wellness.

**Independent Living Philosophy**

Care Management under the Independent Living Philosophy strives to empower individuals with the goal of member self-determination and full community integration. Its goals for the community is to achieve equal access through reducing and removing physical and societal barriers.

The traditional, Care Management model focuses on “fixing what is broken.” In this philosophy, a person with a disability has limited choices regarding participation in community life. These choices are limited because of community barriers, low community- and self-expectations, stigma, prejudice, and discrimination. Societal barriers, not the disability itself, are the major reason many individuals with disabilities have problems living independently. This model does not “rehabilitate” the person, but instead focuses on reducing and removing the barriers that limit his/ her choices.

**Recovery and Wellness Principles**

Recovery and Wellness principles empower individuals to improve their health and wellness, live a self-directed life, and strive to reach their full potential. These principles focus on taking a holistic approach to the member’s health, encompassing physical, mental, social and spiritual well-being.

**Accessibility and Accommodations**

Providing care that meets the needs of seniors and people with disabilities is not only required by the laws but also an integral part of patient center care. It will lead to increased member satisfaction, improved quality of care and health outcomes and ultimately reduce health disparities.

With the model of the Independent Living Philosophy, we can shift our mindset about “disability” to broaden our understanding as:

*The interaction of an impairment with environmental factors.*

2019_LAC_ICTProvVenAttest
This idea allows us to shift the focus from disabilities to the environmental factors. It means that we cannot change the way people are, but we can change and make the environment more accessible for people with disabilities.

**Accessibility**
In order to ensure equal and meaningful access to health care for people with disabilities, we need to make reasonable accommodations. Activity limitations vary among people with disabilities and accommodation needs to be adjusted based on the each member’s needs and functionality level. Ask for the member’s choice of accommodation and honor their choice as much as possible. Please familiarize yourself with all the available auxiliary aids and services, accessible equipment and route in and around your facility.

- Auxiliary services and aids: TTY, American Sign Interpreter, large print, audio, etc.
- Accessible facilities and equipment: Accessible ramps, wide aisles, accessible parking space, wheelchair scale, etc.

**“People First” Language**
In addition to accessibility, it is important to provide care and services using respectful expressions and phrases for people with disabilities. As the name indicates, it puts people first and recognizes people with disabilities – first and foremost – as people.

**Cultural Competency**
Culture refers to shared values, norms, traditions, customs, history, and beliefs that are held by a group of people. Each one of us has a dynamic and unique cultural background that influences how the person perceive health and illness, seek healthcare and express symptoms. Culture impacts every healthcare encounter and building the skills to effectively engage and communicate with diverse member population is essential in healthcare delivery.

Cultural competency in health care refers to an ability to provide care that is respectful of members’ diverse values, beliefs and behaviors, including tailoring care delivery to meet members’ social, cultural, and linguistic needs.

Research shows that the use of culturally and linguistically appropriate services are a critical part of delivering health care services. Enhanced cultural sensitivity in the delivery of health care services will:

- Ensure equal and meaningful access to health care services
- Improve quality of care which leads to better health outcomes
- Increase member satisfaction
- Decrease unnecessary procedures and lower the cost of medical services

**Diversity among L.A. Care Members**
More than a half of L.A. Care members are Hispanic/Latinos, 15% are Caucasians, 11% are African Americans, and 10% are Asians and Native Hawaiians/Pacific Islanders.

Approximately 40% of L.A. Care members have limited English proficiency - meaning they do not speak English as their primary language and have limited ability to read, speak, write, or understand English.
Core Competencies
Three core competencies are critical in navigating the complexity of cultural differences:
• Self-awareness is a process to gain awareness of how culture shapes who you are and other people.
• Knowledge is learning about differences and the historical, societal, political, and religious influences that affect other people’s worldview. Knowledge can be enhanced by continuous learning.
• Skills are to use awareness and knowledge in navigating the cultural differences. It can be built and improved through cross-cultural encounters.

Cross Cultural Communication Skills
Here are eight simple tips you can apply to enhance communications when providing services or care.
• Build awareness of yourself and knowledge of the other
• Keep biases in check
• Ask open-ended questions
• Listen with empathy
• Practice attentive, active and affirmative listening
• Be open to new information
• Explain your own perceptions and knowledge
• Treat people as individuals

Beliefs about Health and Illness
Every member has their own view on wellness and approaches to healing. To develop a personalized care plan based on the cultural aspect, ask the member to explain his/her idea of health and illness, treatment preference, use of home remedies, and diet restrictions.

Navigating Healthcare System
Navigating the healthcare system can be challenging. Members may have limited experience with the healthcare system and need help in understanding and accessing health care services.

Health Literacy Level
Health Literacy refers to the degree to which individuals have the capacity to obtain, process, and understand basic health information and services needed to make appropriate health decisions. There are many specialized vocabulary and jargon used in the health care and medical fields, which could be difficult to understand. Use plain and non-technical language that is easy for members to understand.

Language Barriers
Limited English proficient members face language barriers when accessing health care services. Unaddressed language barriers can compromise quality of care and result in poor outcomes. Language assistance services are not only one of the key components of patient-centered care but also regulatory requirements.

Language Assistance Services Requirements
Post translated signage about no-cost interpreting services at key points of contact.
Offer no-cost interpreting services to members.
Never imply, request, or require members to provide their own interpreters.
Strongly discourage the use of friends, family members, and especially minors as interpreters except in emergencies.
Document member’s preferred language, request or refusal of interpreting services in the medical record.
Maintain appropriate qualifications on file for bilingual practitioners and office staff who communicate with limited English proficient members in a language other than English.

Removing Language Barriers
Please review policies and procedures on language assistance services at your organization or facility and familiarize yourself with how to access the services.
• 24-hour, 7-days a week Interpreting services
• Written member information materials in the member’s threshold language
• Auxiliary services and aids (e.g. TTY, American Sign Interpreter, large print, audio)

Working with Interpreters
Here are some tips to make your member encounters with an interpreter go smoothly:
• Have a quick briefing with the interpreter prior to the appointment or call. This is an opportunity to inform the interpreter on the nature of the encounter.
• An interpreted conversation requires more time. Plan accordingly and allow enough time for an appointment or call.
• You are communicating with the member using an interpreter. So remember to greet the member first, face the member if it is an in-person encounter. Speak in the first person. There is no need to say “Tell the member that I said…” You can address the member directly.
• Speak in a normal voice, not too fast or too loud.
• Give information in small chunks and pause after a full short sentence for the interpreter.
• Interpreters are trained in medical terminology; however, interpretation will be smoother if you avoid acronyms, medical jargon and technical terms. Use basic and plain language.
• Interpreter’s job is to interpret everything you said. If there is anything that should not be communicated to the member, refrain from saying it.

Sensitivity to Cultural Differences Relevant to Delivery of Health Care Interpreting Services
All aspects of members’ culture have impact on the interpreting services in healthcare settings. There may be different level of comfort with interpreting services and various interpreting technologies used. Please be respectful of members’ needs and preferences of language assistance services while informing them of the importance of the qualified interpreting services and encourage the use of it.
• Member’s cultural norm may affect their comfort level of having an interpreter at medical appointments.
• Member’s gender or religion may affect preference for interpreter’s gender.
• Member’s familiarity level with technology may affect preference for type of interpreting services.
• Members’ geographical location, the size of the county may affect the accessibility and availability of interpreting services.
Long Term Services and Supports (LTSS) Programs and Eligibility

Managed Long Term Services and Supports (MLTSS) typically refers to a wide range of services that support people to live independently in the community.

What Services are Covered under MLTSS?

In Home Supportive Services (IHSS)
IHSS is a California state program that provides in-home care to low-income seniors and persons with disabilities, allowing them to remain safely in their home. All IHSS beneficiaries must:
- Be a California resident and living in their own home
- Receive or be eligible to receive Supplemental Security Income/State Supplemental Payment (SSI/SSP) or Medi-Cal benefits
- Be 65 years of age or older, blind, or disabled by Social Security standards
- Have a mild cognitive disorder such as dementia and need assistance with 2 activities of daily living (ADL)
- Submit a health care certification form (SOC 873) from a licensed health care professional indicating that they need assistance to stay living at home

Please see the process below for coordination with the County on IHSS.
Community Based Adult Services (CBAS)
CBAS is a program where members can go to a center during the day for assistance with their daily needs. All CBAS beneficiaries must be Medi-Cal beneficiaries age 18+ who meet one or more of the following criteria:

- At risk for nursing facility placement
- Have organic/acquired traumatic brain injury and/or chronic mental health condition
- Have Alzheimer’s disease or other dementia
- Have mild cognitive impairment
- Have a developmental disability

CBAS can help members with the following services:

### Core Services
- Professional nursing and medication management
- Therapeutic activities
- Social services and/or personal care services
- One meal offered per day

### Additional Services
- Physical, occupational or speech therapy
- Mental health/psychiatric services
- Registered dietician services
- Transportation to/from center/residence

Long Term Care (LTC) Facility Services
LTC provides medical, social, and personal care in either a skilled nursing facility (SNF) or at home for members with medical or mental conditions who need constant, continuous care. LTC indicators include:

- At risk at home or in the community and need ongoing care in a SNF
- Prolonged nursing support and supervision (wound care, tracheostomy, G-tube, ventilator)
- Walking, getting in/out of bed, bathing, dressing, feeding, using the toilet, special diets, and supervision of medicine
Please see the table below for an understanding of LTC skilled care versus LTC custodial care. The LTC custodial benefit only covers room and board.
Multipurpose Senior Services Program (MSSP)
MSSP is an intensive case management program for seniors who are certified for nursing home placement but wish to remain at home. MSSP provides ongoing social and health care management and includes a waiver program with limited slots in L.A. County. Eligibility is determined by the local MSSP site based on state-set criteria. In order to be eligible for MSSP services, a beneficiary must:

• Be a Medi-Cal beneficiary age 65+
• Live within an MSSP service area
• Be certified for nursing home placement

Care Plan Options (CPO)
CPOs are additional services that L.A. Care may arrange and pay for beneficiaries who have Cal MediConnect. CPO is available to Cal MediConnect members only. All community resources must be exhausted and all CPO services must be authorized by L.A. Care prior to service. In addition, services must be provided through L.A. Care’s contracted CPO provider network.

Examples of this service include:
• Respite care/provider support
• Additional Personal Care and Chore Type Services beyond those authorized by IHSS
• Home modification/maintenance
• Nutritional services
• Personal Emergency Response Systems (PERS)

You must attest that you have received and read this information before you can participate in an L.A. Care Cal MediConnect Interdisciplinary Care Team (ICT). Please check the box below to attest that you have read and understand the above information.
